Invoice as a registered freelancer (monotributo) · Working with real clients since 2026 · Full sample pieces available on request

WHAT I DO

I produce content and automate repetitive work with **Claude (Claude Code), agents and MCP**, so one person can deliver what a small team usually does: Meta Ads planning, scripts, vertical reels, graphic pieces and custom tools. Client names are omitted for confidentiality.

CLIENT WORK

Scripted reels for an insurance agency (producers)

Sector: insurance · Monthly service · Filming, editing and subtitles

- Scripts of 40 to 60 seconds on coverage and common questions, written for talking to camera.
- Filmed with a DSLR and separate audio; edited vertically (1080×1920) in CapCut with subtitles in the brand's typeface and color.
- Delivered in batches: four reels from one shoot exported in a single day, plus corrected versions after client review.
- Clear performance reports and advertising proposals, ready to present.

Monthly communications for a cultural venue

Sector: culture and events · Flyers, reels, photography, web

- Monthly flyers for feed and stories (1080×1350 and 1080×1920).
- Custom events calendar page in HTML with category filters (theatre, music, circus, documentary, workshops) and, in one version, an edit panel so the team can update events without code.
- A 43-second vertical reel shot and edited the same day; event photo editing in Lightroom.

Ad creatives and video for a service business

Sector: upholstery · Ads, promo video, management tool

- Campaign creatives in 1080×1080 and 1920×1080.
- Promo video with voiceover and music built from phone footage.
- Job-tracking spreadsheet (customers, delivery dates, installments, amounts) built with Python and Google Sheets.

OWN AI PROJECTS

CapCut editing agent

Python · ffmpeg · Claude Code

Builds native CapCut projects already cut from raw footage: removes silences, adds B-roll and text. I use it on real reel work.

Code-driven motion graphics

TypeScript · three.js

A 1080p, 60 fps explainer synced word by word to a voiceover, without After Effects.

Open-world 3D game
WebGL · open data

A city built from real OpenStreetMap data, elevation and satellite imagery, running in the browser.

Working system with Claude
Claude · Markdown · scheduled routines

Personal knowledge base, routines that check email and calendar, a prospect queue and a public booking page for scheduling meetings.

HOW I WORK

- **I check what the AI produces** before delivery: facts, prices and conditions against the brief.
- **I document the process** and make it repeatable, so the next delivery is faster.
- **I flag delays early** and propose a new date.
- Available 10–20 hours per week; flexible schedule, UTC-3.

TOOLS

Claude Code · Agents & MCP · Whisper · CapCut · Lightroom · Meta Ads · Python · ffmpeg · HTML/CSS/JS · TypeScript · Flyers in HTML

Client results are not shown without their permission. Full sample pieces are shared on request.
